

Intuit Bayshore

Intuit Achieves LEED Platinum-Certified Building With the Use of Zehnder Alumline Radiant Ceiling Panels.

The Intuit Bayshore building was reconstructed to foster a hybrid work environment while aligning with California’s sustainability laws. The design strategy had to enhance resource efficiency by expanding the natural habitat, ensure good indoor environmental quality and reduce water consumption and waste. Green spaces and terraces were created throughout the campus to incorporate natural wetland bio-filtration while offering educational opportunity on the ecology of the local biodiversity.

Quiet zones were created throughout the building for employees to have a secluded area when needed. The low energy heating and cooling radiant ceiling panels provide localized comfort along with being soundless to align with the quiet zones. The installation of Zehnder’s Alumline Radiant Ceiling Panels allow for an aesthetically pleasing ceiling along with providing a sustainable heating and cooling system. The campus is a flawless design that has a very bold and playful aspect throughout.
